

MARIAN UNIVERSITY WIRELESS INSTRUCTIONS FOR *WINDOWS XP*

Click on the following sequence:

START -> Settings -> Network Connections, and right click on the Wireless Network Connection ICON. Choose the Properties entry in the menu that appears.

Select the Wireless Networks Tab.

Click the ADD button.

Under the Association Tab.

Network Name (SSID) = MUSTUDENT (use UPPERCASE letters)

Use an option pair from one of the columns below:

Security Type = WPA2	Security Type = WPA
Encryption Type = AES	Encryption Type = TKIP

Under the Authentication Tab.

EAP Type = PEAP.

Click on Properties button.

UN-check Validate Server Certificate box.

Select Authentication Method (EAP-MSCHAP v2).

Click on Configure button.

UN-check Automatically Use My Windows Logon Name ...

Click OK.

Check the Enable Fast Reconnect box.

Click OK. Click OK. Click OK.

Watch for the Network Connection Bubble, asking for additional credentials, to appear in the bottom right corner of your screen, and click on the bubble.

In the credentials window, enter the following:

your MARIAN USER ID (the part before the "@marian.edu" in your e-mail address),

your MARIAN PASSWORD (your Marian University e-mail password),

and DOMAIN = "MARIAN_ADMIN" (uppercase).

After a brief period, your computer should display a bubble, informing you that your computer is connected to the Wireless Network. Close any remaining windows that are open.

Since the MUSTUDENT wireless network is present throughout Marian's campus, you will not need to repeat this setup process to connect at other locations.

For Windows Vista instructions, see other side
